

List of Posters

- P01 Mizue Asada**
Effect of the extrinsic protein PsbO on the initial structure in photoactivation of the oxygen evolving complex of photosystem II
- P02 Bram Bet (Utrecht University)**
Swimming at low Reynolds numbers
- P03 Yoshiaki Eguchi**
Anomalous dynamics of Gaussian core model
- P04 Benedetta Flebus (Utrecht University)**
Two-fluid model for the spin Seebeck effect in easy-plane magnetic insulators
- P05 Hiroya Fukuda**
Analytical calculation of the reaction rate for isomerization
- P06 Takuya Gouda**
Study of electrostatic interactions on amyloid fibrils by molecular dynamics simulations
- P07 Yuya Hashimoto**
 ^{51}V NMR study on charge and orbital orders in $\text{Ba}_{1-x}\text{Sr}_x\text{V}_{13}\text{O}_{18}$
- P08 Taichi Igarashi**
Effects of the Ir impurity of $\text{Ba}_4\text{Ru}_3\text{O}_{10}$
- P09 Yukihiro Kajikawa**
Exploration of the Structure of the Folding Intermediate by MD Simulation
- P10 Yusuke Katou**
Orbital degenerated $3d^1$ system Sr_2VO_4 studied by ^{51}V NMR and neutron scattering measurements
- P11 Naoya Kawade**
The pressure effect on the non-linear conduction phenomena of valence fluctuation system SmS
- P12 Hiroyuki Kawamoto**
Predicting epitope of omalizumab to IgE using MD simulations
- P13 Masaya Kimura**
Computational study on the formation of the CPD-photolyase complex
- P14 Shouta Kunikata**
Study on ferromagnetism and superconductivity in Y_9Co_7
- P15 Tatsuya Kurematsu**
Magnetic and Transport Properties of $\text{Sr}_{3.12-x}\text{Ca}_x\text{Y}_{0.88}\text{Co}_4\text{O}_{10+\delta}$
- P16 Shang Li**
NMR Study of the Excitonic Insulator Ta_2NiSe_5
- P17 Yusaku Maeda**
Ferroelectricity in Aluminate Zeolite $\text{Ca}_8[\text{Al}_{12}\text{O}_{24}](\text{WO}_4)_2$ [CAW]
- P18 Hirotaka Maekawa**
High-pressure Hall effect measurements in ZrZn_2
- P19 Daiki Matsubara**
Molecular Dynamics Simulations to Clarify the Water Conduction Mechanism of AQP0
- P20 Shuya Matsukawa**
Unconventional quantum critical phenomena of the Au-Al-Yb quasicrystal and approximant

- P21 Genki Matsuno**
Excitonic fluctuation in tilted Dirac electron system: A possible mechanism of low-temperature anomaly in α -ET salts
- P22 Katsushi Matsuoka**
Structural Transition and Electronic States in Heavily Doped $\text{LaFeAsO}_{1-x}\text{H}_x$ Superconductors
- P23 Takayuki Nagai**
The substituent effects in the stuffed-tridymite-type ferroelectrics BaZnGeO_4
- P24 Hiroki Nagashima**
 Ca^{2+} regulates proton release and electron transfer in water splitting in photosynthesis
- P25 Hiromu Nakamura**
Molecular simulation for understanding chemical process: Metadynamics
- P26 Shin Nakamura**
FTIR and QM/MM study of the proton transfer mechanism via redox active tyrosine Y_Z in photosystem II
- P27 Hironori Nakaoka**
Theoretical study of the ordered phase and the origin of superconductivity in BaTi_2Pn_2 (Pn=As, Sb, Bi)
- P28 Kazuki Nakazawa**
Anomalous Hall effect and persistent current due to spin chirality in a diffusive regime
- P29 Naohiro Nishikawa**
Theoretical Study about Concentration Dependency of Amyloid Fragment Aggregation by Using Computer Simulation
- P30 Kouhei Nobe**
Physical properties of Ce-based approximant crystals
- P31 Naoto Norizuki**
Spin polarization induced by diamagnetic current in Rashba system
- P32 Kaoru Okada**
NMR study on iron-based compounds with ladder-type structure CsFe_2Se_3 and BaFe_2Se_3
- P33 Shunsuke Ozaki**
Analysis of photosynthetic water oxidation of photosystem II by Joliot type oxygen-evolution measurement
- P34 Tetsuro Saito**
Theoretical Analysis on Three Dimensional Gap Structure of LiFeAs
- P35 Takahiro Sakai**
Spin structure of Mn cluster in high-oxidation state and the role of Ca^{2+}
- P36 Hiroki Sakamoto**
Proton-coupled electron transfer in the S_2 -to- S_3 transition of photosynthetic water oxidation as revealed by time-resolved infrared spectroscopy
- P37 Yousuke Sakuma**
Study of the Early Stage of Green Fluorescent Protein Folding
- P38 Ryuma Sato**
A Computational Study of The Electron Tunneling Pathways in DNA photolyase
- P39 Atsuki Shinohara**
Observation of Superfluid in ^4He Nanotube with a Long Effective Length
- P40 Yuuka Shiraishi**
Photo-Seebeck effect in ZnS

- P41 Manu Sushruth (University of Western Australia)**
Magnonic crystals for nanoparticle detection
- P42 Yuhei Tachi**
Generalized-Ensemble Simulations of Metal-Ligand Self-assembly into Spherical Supramolecule ML
- P43 Kazuki Tahara**
Development of an artificial photosynthetic nano-device utilizing photosynthetic proteins and metal nanoparticles for light-driven water splitting
- P44 Ryoto Takizawa**
Superfluid transition in two-dimensional ^4He film under rotation
- P45 Shun Terauchi**
Hydrogen bonds formation of Staphylococcal Nuclease using H/D exchange NMR and REMD simulations
- P46 Masayuki Toyoda**
In-plane Anisotropy of Fe-based superconductors Co-doped BaFe_2As_2 and non-doped LiFeAs
- P47 Shuichiro Tsukamoto**
Study for selectivity of histone deacetylase inhibitor using generalized-ensemble molecular dynamics simulations
- P48 Motoki Yamaguchi**
Modified electronic structure of the chlorophyll dimer P680 by site-directed mutation of a nearby amino acid residue in photosystem II
- P49 Takeshi Yamaguchi**
Magnetic and superconducting properties under high pressure in UNi_2Al_3
- P50 Terufumi Yamaguchi**
Linear response theory of spin torques due to spin waves
- P51 Takafumi Yamamoto**
Non-uniform magnetic system in $\text{CaRu}_{1-x}\text{Sc}_x\text{O}_3$
- P52 Toma Yamashita**
Specific heat of the icosahedral quasicrystal $\text{Zn}_{88}\text{Sc}_{12}$ and its periodic 1/1 approximant Zn_6Sc
- P53 Takuya Yoshimura**
Huge Specific Heat of ^3He Fermi Liquid Absorbed in 3D Nanopore
